

Rigid Shoulder Braces

DonJoy Lerman Shoulder

Ideal Application
For immobilization following shoulder fusion, dislocation, reconstruction or soft tissue repairs. Brace allows the shoulder to be positioned in external, neutral, or internal rotation. Following brachial plexus injury this orthosis can be used to prevent further stretch during the healing process.

- Features and Benefits**
- Fully adjustable in all planes -- allows for desired specific abduction up to 45°
 - Comfortable
 - Easy to apply
 - One size fits most (28" - 40")
 - Universal - fits left or right
 - Patented open cell non-slip material for patient comfort and consistent position

Part Number: 11-1361-9 Lerman Shoulder Orthosis Universal Size
